im the flexible and modern solution for modern design

Our Finish Foil is a versatile, high-quality surface solution designed to meet diverse customer needs.

It is **formaldehyde-free**, ensuring a safer and more environmentally friendly product. For added protection, we can provide antibacterial properties, making it ideal for hygienic and sensitive environments.

Thanks to our recent machine upgrade featuring excimer technology we now offer **enhanced surface finishes**, with gloss levels as low as 2 units. This allows for **deep matte finishes** that are both trendy and durable. We also provide a range of **textures** to complement the latest decor trends, giving you the freedom to create surfaces with both aesthetic appeal and exceptional quality. Whether you need specific textures, gloss levels, or antibacterial features, our Finish Foil products can be tailored to your exact specifications.
